Western Allegheny Community Library partners with World Kinect Energy Services to **reduce costs and become more energy efficient**

OVERVIEW

The Western Allegheny Community Library is a public library located in the town of Oakdale in the western part of the state of Pennsylvania. With over 10K members, their mission is to inspire, engage, and educate their community through different programs and services.

Western Allegheny Community Library had a goal to improve their infrastructure and reduce their energy spend. Being a member of the Pittsburgh Airport Area Chamber of Commerce, they consulted with World Kinect Energy Services, who is the chamber's exclusive energy partner.

CUSTOMER CHALLENGE

Outdated equipment is known to be a driver of increased energy consumption. Keen to improve their infrastructure and find ways of becoming more energy efficient, the Western Allegheny Community Library was looking for a partner that would be able to help them evaluate their facility and implement cost effective solutions to update key equipment and save on energy.

"The project has been completed and we couldn't be more satisfied with the results. Our customer's reading experience has been enhanced due to the new LED lighting. Our electricity usage has decreased, and we are relieved not to have to worry about continual service calls and the cost of those calls for our old HVAC units. The new HVAC units are more efficient, and those operating costs will decrease too. "

*Amy McDonald
Executive Director, Western Allegheny Community Library*

OUR SOLUTION

To help the Western Allegheny Community Library achieve their cost reduction and energy efficiency objectives, World Kinect Energy Services engaged them in an energy efficiency project to replace old lighting with new, brighter, and energy efficient LED lighting, throughout the library. As part of this project, 4 new HVAC roof units were installed to replace the outdated equipment. These new HVAC systems are also energy efficient and help effectively regulate the temperature within the space, allowing for a reduction in energy consumption, and ultimately a reduction in energy spend.
